

# Hewlett-Packard Capital Structure

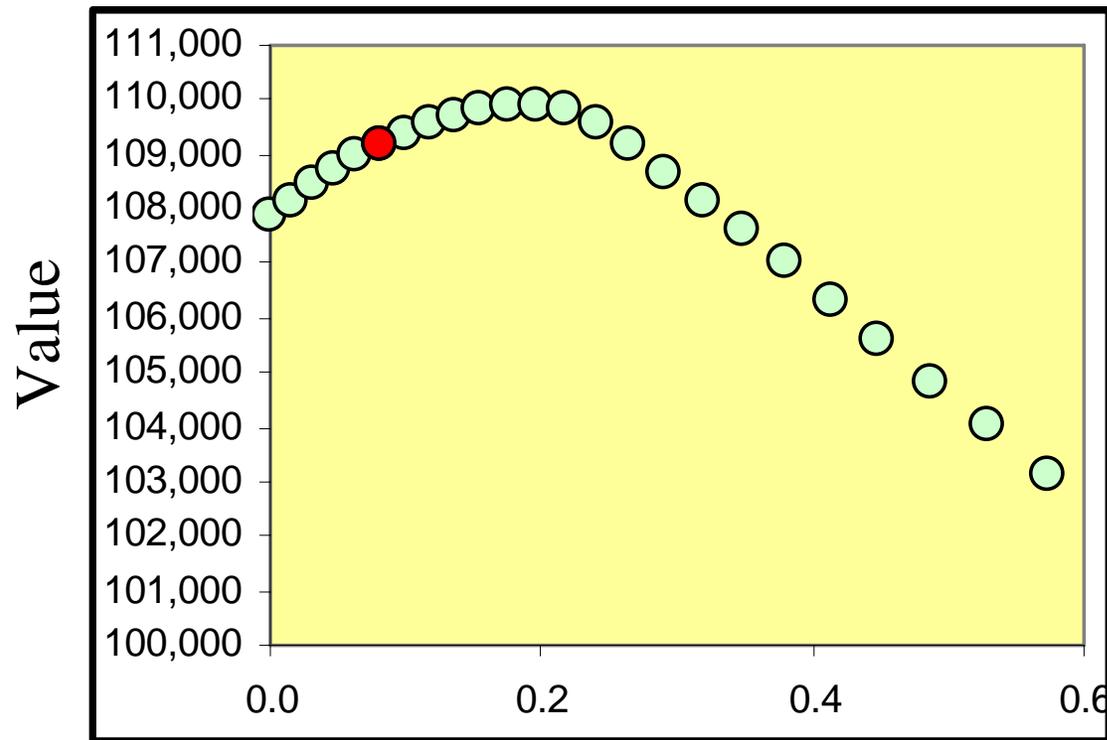

*Case Study*

# Financial Statement

- Simplified financial statement as of 3Q2008
- Enterprise value of \$109B (Debt + Market Equity) is used
- AA Credit rating calculated, which is consistent with HP's S&P rating

Company name	Hewlett-Packard
<b>TABLE I</b>	
<b>Income Statement</b>	
Operating EBITDA	11,424.0
D&A	-2,705.0
<b>EBIT</b>	<b>8,719.0</b>
Other income	989.0
Gross interest expense	-531.0
<b>EBT</b>	<b>9,177.0</b>
<b>Tax</b>	<b>-1,913.0</b>
<b>Net profits</b>	<b>7,264.0</b>
<b>Balance Sheet</b>	
<b>Assets</b>	<b>109,183.0</b>
Market equity	101,000.0
IB debt	8,183.0
<b>Total liab. &amp; equity</b>	<b>109,183.0</b>
<b>TABLE II</b>	
<b>Input/Output Parameters</b>	
<i>Effective tax rate</i>	21%
<i>Pre-tax cost of debt</i>	6.49%
<i>Implied spread</i>	0.36%
<i>Implied risk-free rate</i>	6.13%
<i>Implied rating</i>	AA
$V = D+E$	109,183.0
$V^* = D^*+E$	109,666.5
$Vu^*=(1-T)D^*+E$	107,859.9

# Capital Structure Curve

Model output shows the company's "value" curve based on the financial statement shown on the previous page. This is the inverse of the WACC curve.

# In the News

## **Microsoft, Hewlett-Packard and Nike Announce Buyback Plans for Shares**

By MICHAEL M. GRYNBAUM

Published: September 22, 2008

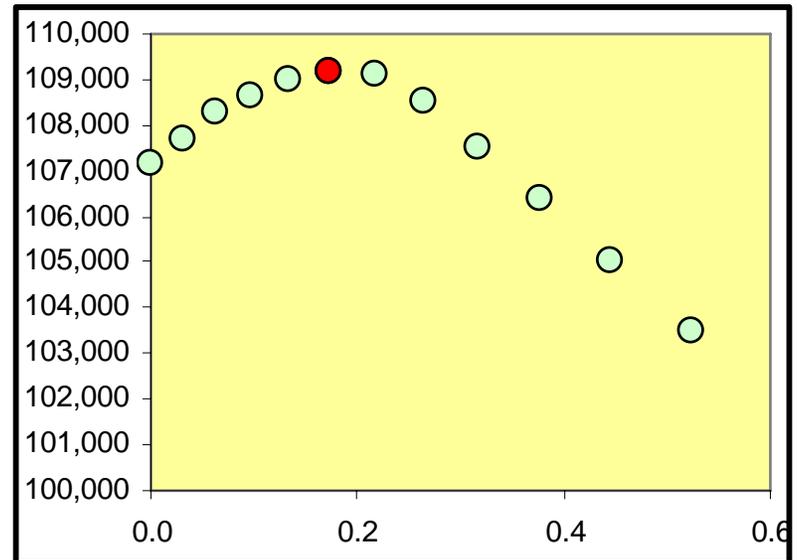

... Microsoft said it would buy back \$40 billion of its shares and raise its quarterly dividend by 2 cents, to 13 cents a share. [Hewlett-Packard will repurchase \\$8 billion in shares](#), and Nike said it would buy back \$5 billion. ...

# Model Output – Scenario 1

Consider \$8B equity buyback is  
financed by \$8B debt issue

Table III	
<b>Additional equity</b>	-8,000
<b>Additional debt</b>	8,000
<b>Total additional assets</b>	0
<b>% Impact on EBIT</b>	-1%

<b>Implied rating</b>	<b>A+</b>
-----------------------	-----------

The model shows that this scenario of \$8B debt-financed equity buyback will push the capital structure to the optimal, giving HP a new rating of A+ (red point in graph). There is, however, a slight drop in EBIT because of the debt-equity swap. Will HP be happy with this? Possibly, but let's check out other scenarios.

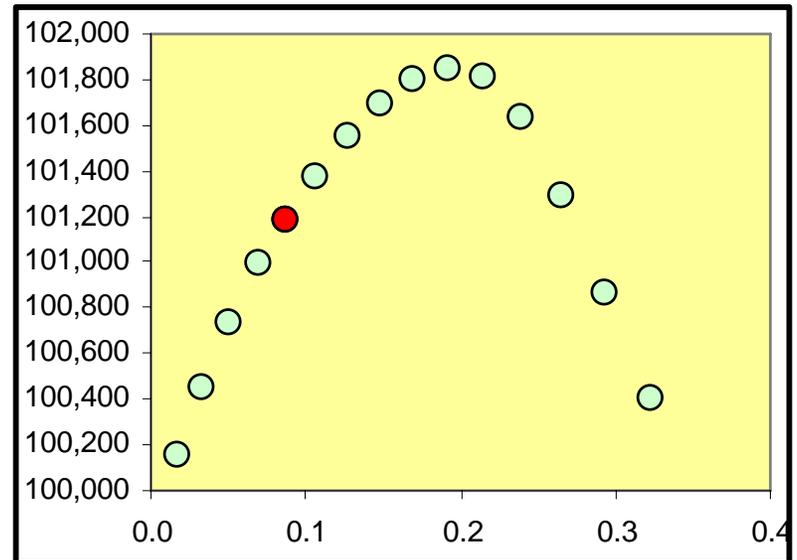

# Model Output – Scenario 2

How about \$8B equity buyback, all financed by cash/asset sales?

Table III	
<b>Additional equity</b>	-8,000
<b>Additional debt</b>	0
<b>Total additional assets</b>	<b>-8,000</b>
<b>% Impact on EBIT</b>	<b>-7%</b>

<b>Implied rating</b>	<b>AA</b>
-----------------------	-----------

The model shows that this scenario will maintain both the underleveraged standing of the company, as well as its original credit rating of AA. However, the EBIT has fallen by 7% due to contraction in company size. Therefore, this scenario offers no improvement over the original capital structure.

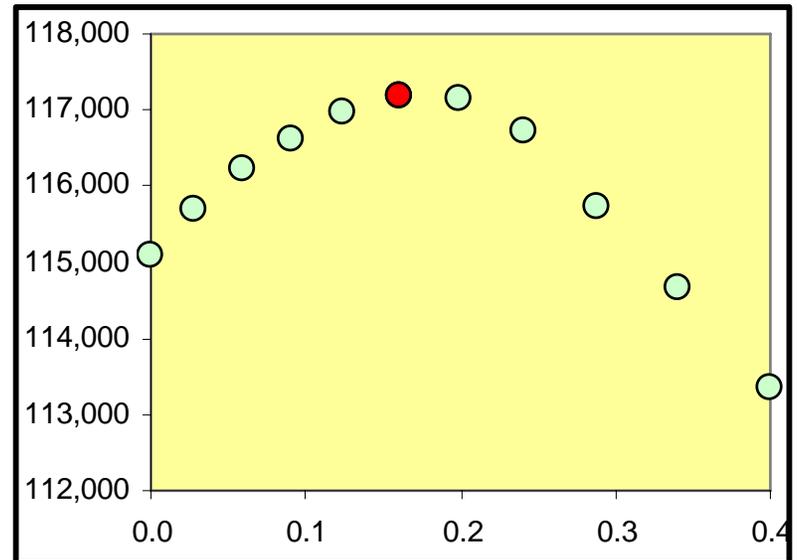

# Model Output – Scenario 3

Now consider \$8B debt issue to finance \$8B in new assets

Table III	
<b>Additional equity</b>	0
<b>Additional debt</b>	8,000
<b>Total additional assets</b>	<b>8,000</b>
<b>% Impact on EBIT</b>	<b>7%</b>

<b>Implied rating</b>	<b>A+</b>
-----------------------	-----------

This scenario pushes the capital structure to the optimal, similar to Scenario 1 (red point in graph). The rating of A+ is also the same, but the expansion in company size increases the EBIT by 7%. Therefore HP may want to consider purchasing new assets rather than buying back its equity, assuming the right assets are available.
